

# How to Tie a Latigo

## OFFSIDE LATIGO

Join 2 open web ends together and slide the girth to the centre. Then join the open ends together and put through D on saddle front to back and then buckle up on girth. There are two pieces of web that go through the pin on the girth.

## NEAR SIDE LATIGO

Run the latigo strap from the saddle to behind the girth through to the front, back up to the ring on the saddle front to back and then again through the girth and push pin of girth buckle through required hole.
